Cowlar Wins \$10,000 At Pakistan Startup Cup.

They narrowly lost the finals of Global Future Agro Challenge Event, GEC 2016 6 months ago but Cowlar turned the tables around at the Pakistan Startup Cup by winning US\$ 10,000. CricFlex ended up as runner up.

The event was organized by Startup Cup in collaboration with TIE and US Embassy.

The event took place at Islamabad Marriott Hotel.

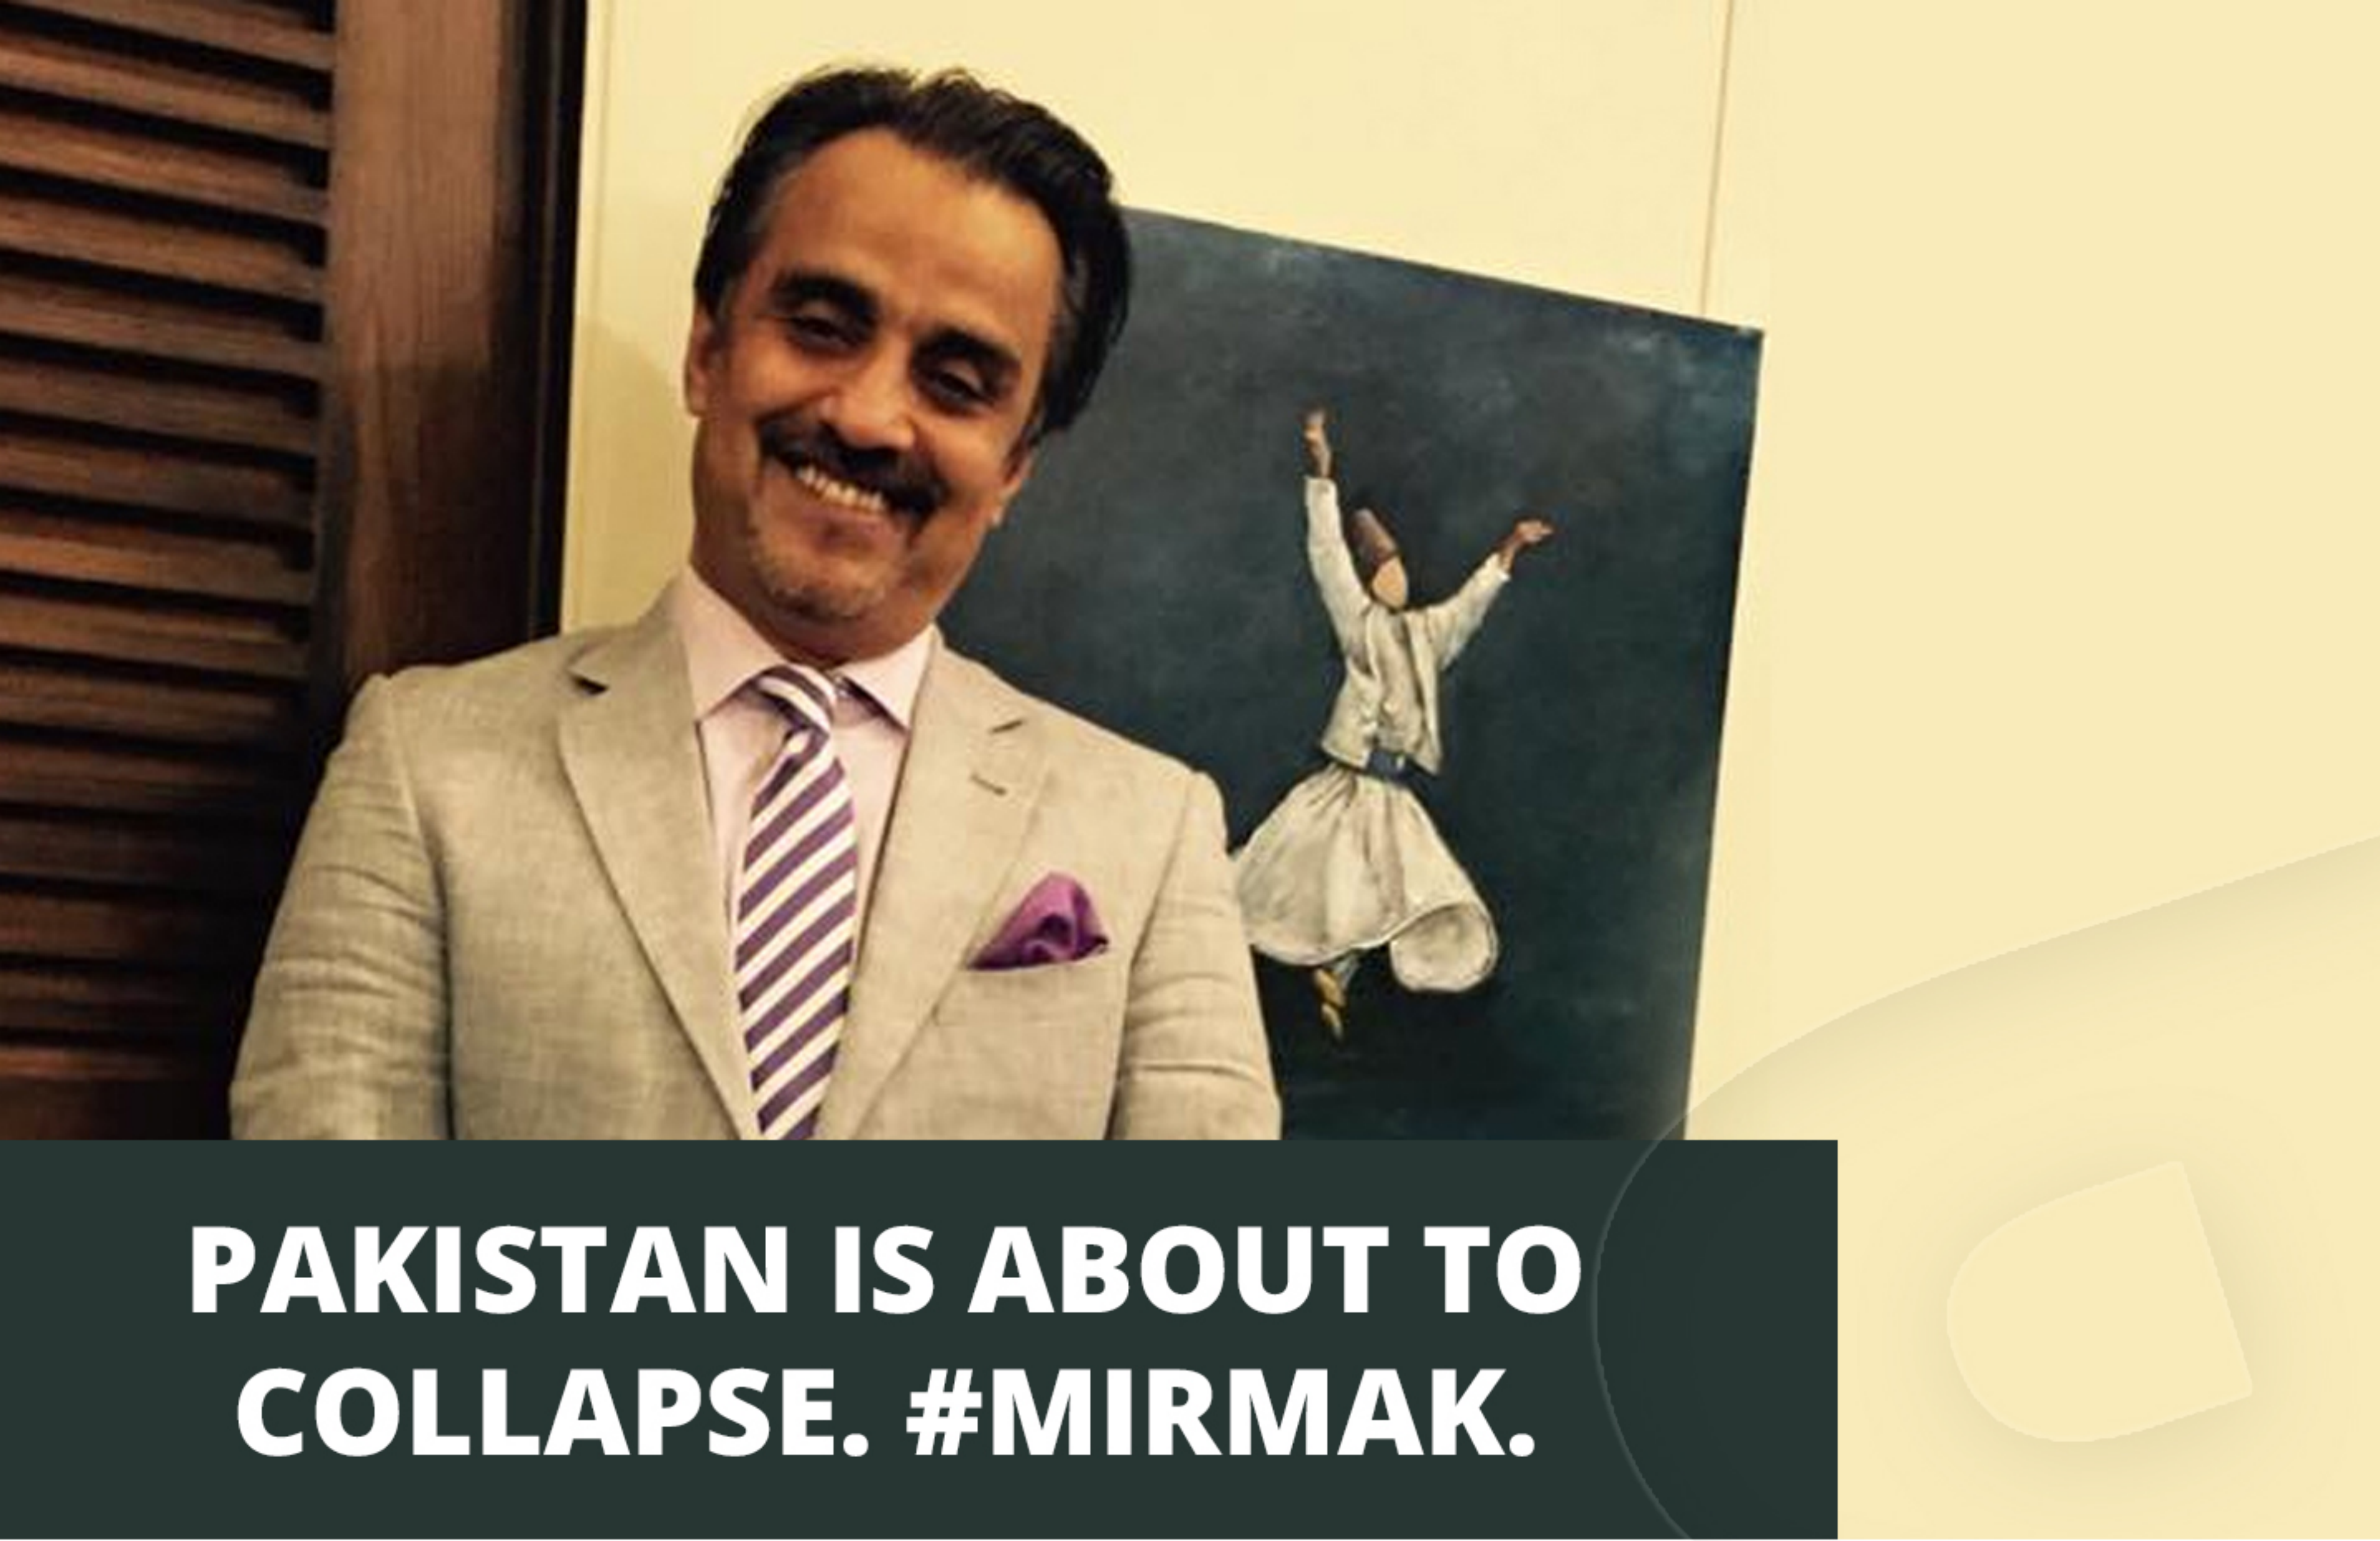

“We will be spending the Millions Rupees won to create a model Cowlar village near Islamabad” – Umer Adnan, CEO

The Smart Collar For Cows:

Cowlar is a dairy monitoring system which results in increase in milk yield, early disease detection and increasing profitability. The system assists with tracking the cow's core temperature and GPS enabled, real-time activity.

To know more about Cowlar, [click here](#).

PAKISTAN IS ABOUT TO COLLAPSE. #MIRMAK.

When I left Pakistan in my teenage years, Zia-ul-Haq was in power and I remember some elders discussing amongst themselves that **Pakistan is about to collapse.**

Then I moved to America and while in my university at Rutgers, I became **President of The Pakistani Association** in my junior year for one term, and so many Pakistani-American students would talk about how Pakistan has no future and I am wasting my time promoting Pakistan.

Then came Wall Street and on Wall Street, many confused Pakistan with Palestine when I told them where I was from and the few who knew about Pakistan, gave me 1 billion 699 million reasons based on their Sovereign debt calculations, economic forecasts, currency fluctuations, political instability and many other reasons telling me that Pakistan will collapse.

Then when my children were born in America, I wanted them to be proud of their heritage and when I went to put them in school, their teacher told me that how her husband dealt with Pakistani diplomats through the State Department and how it predicts that Pakistan will not be there in a few decades.

Then when I came to serve my country in **1999 as an Advisor**, then it was everywhere in the news around the world that since there is a Martial Law Governing the country, and since without Democracy, Pakistan will be rejected by IMF, by United States, by Europe, and by all lending agencies and we would DEFINITELY collapse this time.....

Well, since I was in my early teenage years till now, three decades later. Let me tell you who has collapsed.

The second biggest power in the world, the **Soviet Union**, collapsed.

Argentinian economy collapsed.

Greece collapsed.

Portugal collapsed.

EU is at the brink of a collapse.

America with a **\$19 trillion dollar debt** is worse than collapsed.

Iraq with billions of oil revenues collapsed.

Libya with trillions in oil reserves collapsed.

Venezuelan government toppled and the old system collapsed.

Syria collapsed.

The currency Euro is about to collapse.

The most loved commodity, Oil, since 1986 collapsed **3 times.**

Zimbabwe collapsed economically.

Congo collapsed even with its diamond reserves.

Liberia collapsed because of its leaders.

Yemen collapsed because of its internal rift.

Israel, the favourite of America has fallen off its favourite list, indicating an imminent collapse....

So all the idiots who are waiting for Pakistan to collapse since the past 30 years, wait till the doomsday.

We are not going to collapse. We had economic hardships, terrorism, external intervention, enemy neighbours, and international opposition..yet we have grown. **We beat terrorism**, we are growing economically. **Our GDP has grown in the past 30 years**, our per capita income has grown, our standard of living compared to the past 30 years has grown, we are a nuclear state, we now have CPEC, we have talent and we have resilience and we have tenacity. And most of all, we have **Allah on our side.**

So to all those who have tirelessly waited for 30 some odd years, let me give you a piece of advice, may you be within or outside Pakistan, you will come, you will go, your children and grandchildren will come and they will go... but Pakistan is here to stay. Pakistan is here to grow. Pakistan is here to become better.

Pakistan is here because Pakistanis DO NOT GIVE UP...

This is guest article by **Mir Muhammad Ali Khan.**

Mir Mohammad Alikhan is internationally renowned Investment Banker, Entrepreneur & Capital Markets Advisor. At the age of 29, he became the youngest Chairman and Founder of a Full service Investment Bank in America and the first Muslim to have owned an investment bank on Wall Street. He has had a successful career as Founder & Chairman The Financial Group, Inc., Federal Advisor to Govt. of Pakistan, a Member of New Jersey Governors Council, a Senior Advisor to New Jersey State Mayors and US State Senators. He introduced Islamic Banking Research into mainstream America by co-sponsoring and advising Harvard University to launch Harvard Islamic Finance and Information Program (HIFIP).

He also developed "THE WORD'S FIRST ISLAMIC BANKING BENCHMARK INDEX on WALL STREET Named:KMS-SAMI: (Socially Aware Muslim Index) Which Is Now A Functional Index Run By The Dow Jones Indices. He has also been featured in "Who's Who of Top Executives in the World". Featured in "Humans Of Pakistan" and in 2015 he became the first Pakistani ever to have a movie produced on his life through a first time co-production of Hollywood and Pakistani production house Sermad Films, The Producers of the movie "JALAI BEE". ENTREPRENEUR FROM MULTAN EARNS \$4500 ONLINE IN 24 HOURS.

Entrepreneur who learnt from his failures

“NEVER GIVE UP”

People have always been inspired by heroic struggles against odds, the survival and eventual triumph that give them hope and courage to fight. Such stories from around the world ignite the spirit within us to never lose confidence in ourselves and achieve all that we have the ability of achieving.

This cliché phrase probably fits best to Tanveer Nandla. This is because this web entrepreneur of Pakistan tells us that we should never stop believing in ourselves and in working hard for achieving our goal because we never know that success might exist around the next corner.

Early Struggles:

From his humble beginnings in Mouza Nandla, an area 8 km away from the city Multan, his struggles began with limited resources. In 2007, he did BS Information Technology from Bahauddin Zakariya University. He was the youngest son of his family and was more attracted to

computers as compared to his studies. His passion for computer knowledge made his academic career fall behind. He secured low marks in FSC which led him to choose BS Information Technology in BZU.

There was a time when due to his consistently bad financial circumstances, he had to take a loan to establish his own office and his failed to pay the loan which resulted in closure of his office.

However, being a hard-working and optimist man as he is, he did not give up and soon established another office at shared basis.

Tanveer recalls those days and tells his disciples that in the sizzling summers of Multan, he used to sit in his office without any air conditioning and work for many hours. It was the time in his life, when the term “office hours” simply lost its meanings because Tanveer used to wake up and work for up to 20 hours a day.

His Achievements:

In the early days of internet, Tanveer became fascinated

with AdSense and earned \$64 when earning money online was not even thinkable. This was his first time when he entered the world of entrepreneurship.

After that he created his first ever website pkfunda.com which went live in 2008. His website got so much traffic in a short period of time that it resulted in a collapse of server. But this setback did not discourage him from continuing in this field. He learnt web optimization and server management for keeping the server running in case of high user traffic. He went through continuous trails, mistakes, and failures before reaching to a point where he could finally see success coming through.

Well, if you ask one reason behind his success; it is his undaunted determination and will. After losing two accounts, anyone could lose hope but not Tanveer. He made a third account on AdSense, and this time invested a lot of time learning SEO tactics that could help him develop some serious traffic; this hard-work paid off as Tanveer crossed the barrier of \$100 for the first time in his career as a web entrepreneur; his first earning from that account was \$114.

That success after many failures armed him with never ending optimism, curiosity and determination. It was an emotional chapter of his life, since a boy from a backward area of Multan who knew little about computer crossed the barrier of \$100 per month.

In 2011, he developed a Sports-based website because of his craze for cricket and other sports. All the experiences of his previous work helped him in working in the right direction and made this website a success all along. In a single day, he earned \$4500 from his sports website.

In 2012-13, he built a fashion-based website from which he started generating money from the second month of its launch.

His Aims:

Tanveer Nandla aims for a very bright future. Currently he is a lecturer at Bahauddin Zakariya University and is teaching programming languages to the students. He is also managing a company named as “MWebs” along with continuing blogging and SEO programming at a few niche websites.

His Advice:

Tanveer Nandla, has now achieved the heights of success, the failures could not discouraged him from proceeding with persistence. He learnt from his mistakes and used the failed experiments as a ray of light to see his path to success clearly.

The advice he shares with the upcoming IT professionals is,

“Future belongs to I.T. savvy youth of Pakistan, they should not be afraid of failure because it is only the first step towards success. They should define their goal maturely and work hard to chase that goal. They should recognize their skills and their personal calling and always follow what fascinates them”.

Tanveer’s journey is all about achieving success with limited or almost no resources at hand. Belonging to an agriculture based area, computer was a pretty different field to adopt. He often faced shortage of financial resources for turning his imagination into a reality but his passion and belief in his own abilities kept him fully motivated all the time.

You can get in touch with Tanveer using:

MEET INTERNET MILLIONAIRE , FIVERR SUPER SELLER AALIYAAN CHAUDHARY.

**“You cannot change your destination overnight,
but you can change your direction overnight”.**
Jim Rohn,

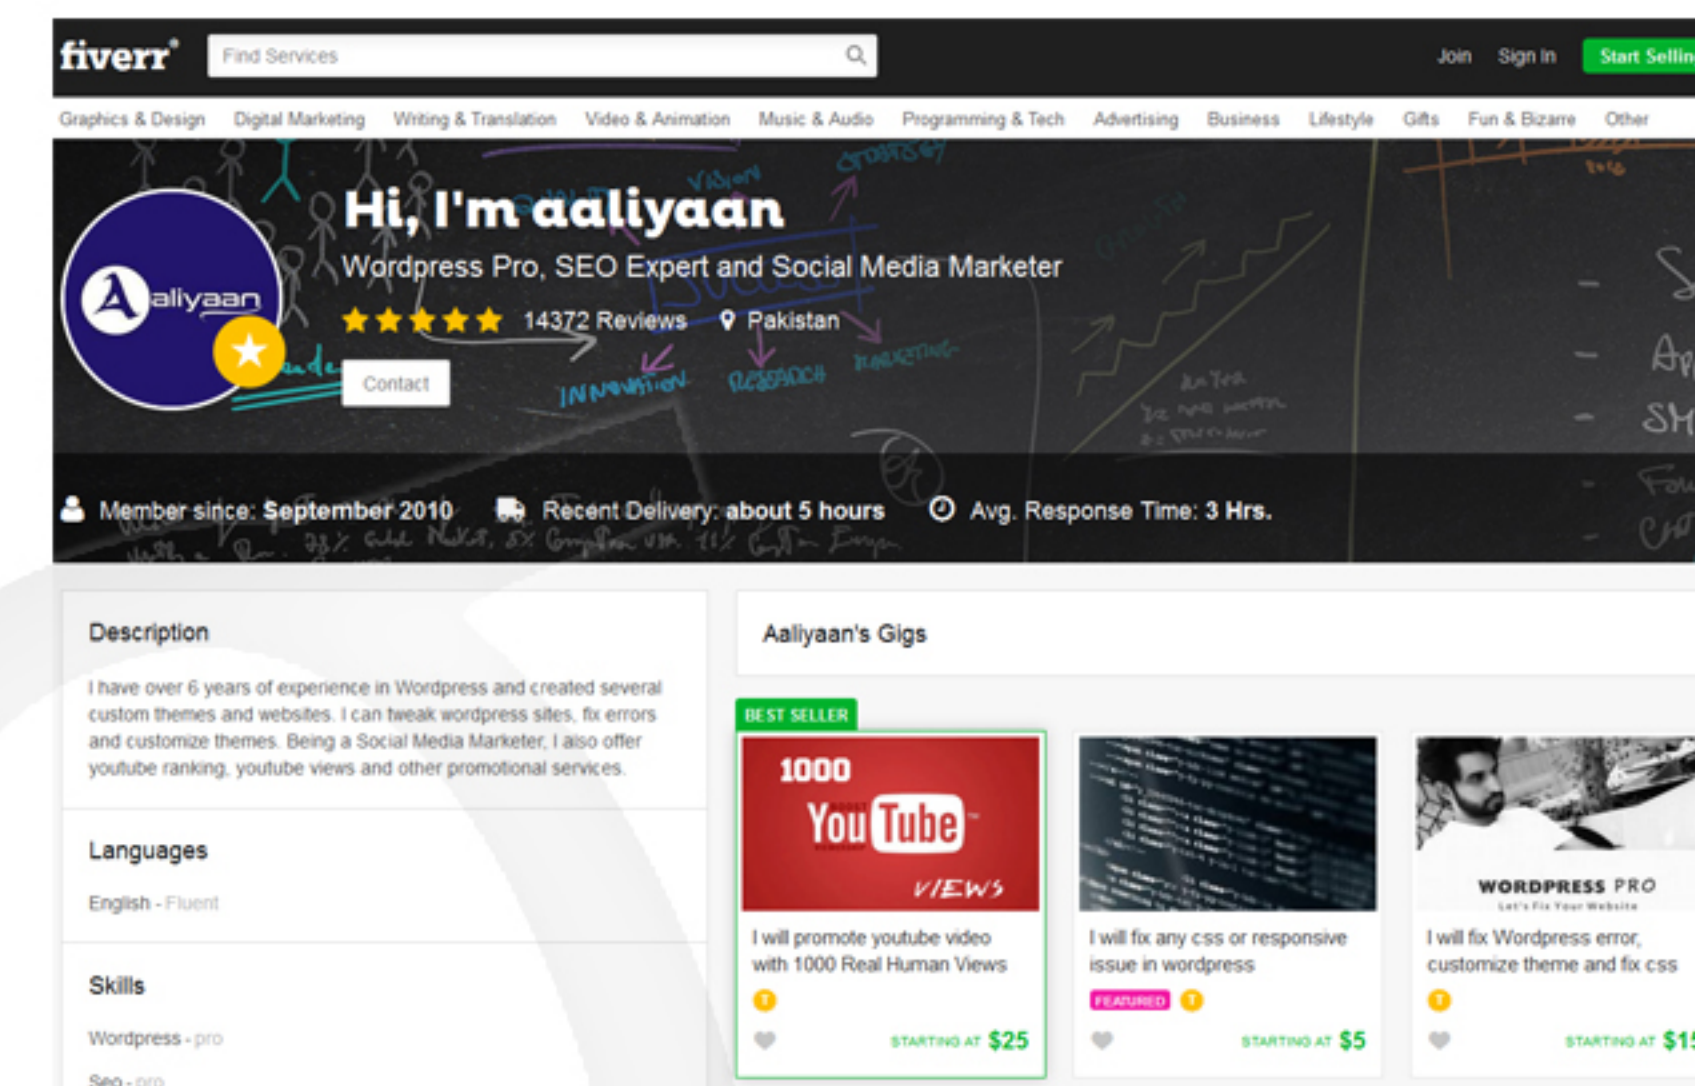

This quote seems to fit in well with people who make money online as they usually go off the beaten path. Their strategies for succeeding are different than an average person. Moreover, technology has sorted out that for young entrepreneurs; success is dependent on hard work, determination, and choosing the right career path. In Pakistan, Aaliyaan Chaudhary is one such person, who brought a change to himself by tripling his revenues.

His Education:

Aaliyaan has a degree in business administration but is mainly focused on WordPress development, design, YouTube SEO and Social Media Marketing.

His Experience:

Aaliyaan Chaudhary is an expert in WordPress development, has created over 100 custom themes and plugins collectively. He has an experience of more than six years and worked with over 23,000 clients worldwide with a 100% positive feedback. He is also covered on [Fiverr official blog](#).

His Journey:

Aaliyaan created his first Gig in YouTube promotions and started offering different services to people. He developed strong coding skills and created WordPress Gigs. The success didn't come at once, it took him some time to flourish, but he became the number one WordPress and a Top rated seller on Fiverr as a Freelancer.

He is also running bunch of viral blogs as a hobby which receive over 3 Million Monthly hits.

Throughout these years, he worked all alone without a team. He used his name and fame as a branding and recently started his own company aaliyaan.com which will be launched next month.

Giving Back To The Community:

He strongly believes in giving back to community and empowering youth and encourages them to go for self learning and self independence.

He also started a project '[The Logical Pakistan](#)' where he aims to high light social issues in a creative way, create awareness among people and promote youth icons and inspirations. It's his dream to take this project to a next level and making image of Pakistan a little brighter in front of the World.

His Advice:

**“Focus on quality rather than quantity.
Always over-deliver to make your buyers
want to come back to you over and over. I
have never had to promote my Gigs because
the exceptional quality of my work makes
my clients happy to recommend me to their
friends and other companies they are
connected with.”**

For beginners there is a lesson to learn, success comes not only when you offer something new. It comes when you stop waiting for some miracles to come knocking at your door, it comes with pursuing the right path.

He is also hiring talented and deserving people from the market who have skills in WordPress development, creative writing and designing. You can contact him through his [Facebook Profile](#).

Remember Its Not A Bad Life, Its Just A Bad Day: Fighting Depression #MirMak

I have been meaning to write about this topic which is considered taboo in our culture. Certain events today have compelled me to finally write and write for the sake of the youth of Pakistan.

As i was driving back with my father from a family event earlier tonight i received a call that a friend of mine shot himself dead. Out of depression.

If you had met him, you would not know in a million years that he was suffering from such severe depression. Always cheery, life of the party, loud, lovingly obnoxious with his jokes about every race in this world including his own.

You may ask, than how did it happen ? Well, Depression is the most disgustingly camouflaged mental disease that one can come across. And as much as i have studied human behaviour and the mental sciences within the past 25 years or so, one thing is for sure that ever since i have moved back to Pakistan, i have seen mild signs of depression in so many people. And justifiably so.

We have more problems than majority of the nations in the world. From morning till night we are thrown subtle negativity in some cases to outright depressive news in our faces in addition to the everyday hardship of living life in a developing nation without level playing fields for all.

So what should one do, specially the young and the restless of Pakistan ? Well, let me try to relate to you by giving you some names, Angelina Jolie, Catherine Zeta-Jones, Kylie Minogue, Sheryl Crow, Gwyneth Paltrow, Princess Diana, Abrahan Lincoln, Sir Winston Churchill, Vincent Van Gogh, Sir Isac Newton, Mark Twain, and many more have suffered severe depression, fought it, got it treated and went on to become successful and maintain a healthy mental life.

They were not afraid to admit that there was something medically wrong with themselves and it required medical and professional attention. They were BRAVE enough to say that “this is not the way my story will end”They took the first step of removing the age old stigma of a temporary mental illness being blamed by the society as someone being declared crazy.

To me, you are crazy if you don't treat your depression. To me the people who ridicule your mental state are crazy. Not the one suffering from the illness.

You get a simple scratch on your hand and you run to the doctor so it does not turn into a puss infected arm. You have a simple common cold with fever and the whole family runs to serve you hand and feet to get you cured.

Friends send you get well messages and family treats you like you need to be saved from some serious illness. All this for your physical bodily illness ? How about the Engine that runs that body and your entire life called your mind ? The most important organ of your body, your brain. How about treating it when its calling for attention.

Before i go any further let me admit that i myself have suffered from this terrible disease for a period of time. And it was very difficulty for me to even admit to myself let alone in public like i am doing it today that i was suffering from Depression 10 years ago for a period of 2 years.

My ego would not allow me to admit that because i was motivating the world around me, how could i show to the world that i myself was suffering from something deep down inside the mental corridor of thoughts. But i decided that this is not the way my still will end. I decided that i will let my hardship prepare an ordinary person like me for an extraordinary destination.

I made up my mind that I would go through pain and consider myself blessed that this mental uneasiness called depression is a sign that there is still life left in me, it is a sign that Allah has something great planned for me up ahead in my life but he wants me to get rid of the negativity and all illnesses from my thoughts before i reach my destination, planned by him. And that very moment i decided that I am not going to give in because One Day i want to say to the world that “i made it” and surprisingly that day is today.

I have written all about it in my upcoming Auto Biography but i am revealing it today for the first time that i have fought depression and won. And If i can do it, so can you. Do not let your life have the shadows and clouds of negativity. Find a Doctor, Be brave, Admit that its just an illness like any other, admit that “you” did not cause it so you will not take the blame for it either. Remember that IF you are Depressed, You are living in the past. If you are Anxious you are living in the future.

If you are at peace only than you are living in the present. And all future comes from present. So take care of your present, Look forward to life and remember to:

Keep your thoughts positive

Because Your Thoughts Become Your words.

Keep your words positive

Because Your Words Become Your Behaviour.

Keep your behaviour positive

Because Your Behaviour Becomes Your Habits.

Keep your habits positive

Because Your Habits Become Your Values

And Finally...

Keep your values positive Because Strong People are made with opposition like the KITES that go up against the wind.

INTERNETMOTIVATION SAM OVENS, 26 YEARS OLD UNIVERSITY DROPOUT, MADE \$10 MILLION FROM CONSULTING BUSINESS

“Underneath every mistake in business is a valuable lesson. Unfortunately, many entrepreneurs miss these lessons because they lament and blame others over the mistakes”. Ajaero Tony Martins

When you have an entrepreneurial spirit for work, you look at job opportunities a little differently than average job seekers. This different perspective makes people successful in their lives and run on a well-defined career path.

Sam Ovens, is one of the entrepreneurs who gave up his nine-to-five job and carried on to pursue his passion. He moved to his parent’s house and started his business in their garage. After nine months of hard work and spending all of his finances, Ovens’ first business failed miserably. He similarly faced massive failures with the other two businesses. He saw many failures before accomplishing his dreams. But he improved his strategies with every setback.

He observed his mistakes in every business and they became his creative ally for developing a leadership perspective. His traits for entrepreneurship encouraged him to take the plunge to start his business for the fourth time. This time he established a business consulting firm.

This time his business didn’t become a daunting process, his persistence and hard work lead him to a successful start.

He made more than \$10 million after four years of the launch of his consulting firm.

Now his business is no longer located in his parent’s garage, he has sifted it to a proper office. Sam Ovens didn’t fear the factors that discouraged him from starting a business. Today his company has 2,000 clients in 16 different countries. He gives the following advice for the people, who wanted to start their own business,

Build your brand first:

Building a personal brand has several key benefits for entrepreneurs. It helps them to give their business credibility. Your personal brand identifies you with a specific area of understanding and expertise. It reflects who you are and connects you with other people. According to Ovens,

“If people know and trust you and your personal brand, they’re more likely to trust your new business”.

Never stop learning:

Learning is one of the best things in life; there are always new skills to learn and techniques to adopt. Most successful people in the world do not act as they know everything, they always believe in the fact that they have to continuously learn to be successful.

“Thanks to the huge availability of information these days, any entrepreneur can teach him or herself just about anything. I read hundreds of books and taught myself all about marketing, sales, accounting strategy-even personal development methods. I knew that I needed to understand all of this if I wanted my business to grow”.

Monetize your networks:

A business network does not depend on how many people are familiar with your name; it is actually about how many customers they can send you to help you advance with your career. So entrepreneurs should not lose their touch with their networks of contacts, because they are likely to miss out on some of the very big opportunities.

According to Ovens,

“When you are first starting out, don’t forget about your personal network of friends and family. You might be surprised how many potential clients already exist within your immediate sphere”.

For living your life to the fullest, you must look for ways that could help you improve your life. Your struggles for your business outside the comfort-zone can help you to achieve your career goals.

Yahoo's CEO Resume Is Trending On Social Media. Got A Job To Offer?

The sale of Yahoo's asset still has not put Marissa Mayer, CEO Yahoo out of Job. Her resume suggests, she wants to stay around to see the \$5 billion transaction completed.

Very few people know that Yahoo's CEO also worked with Google before joining Yahoo. Here is her resume and her achievements. The note-worthy part here is, her resume is modern, it is unique.

PERHAPS YOU CAN TAKE SOME INSPIRATIOTN OUT OF IT.

MARISSA MAYER

Business Woman & Proud Geek

@mmayer@yahoo-inc.com http://marissamayr.tumblr.com/ Sunnyvale, CA

EXPERIENCE

President & CEO
Yahoo!
July 2012 - Ongoing Sunnyvale, CA

- Led the \$5 billion acquisition of the company with Verizon - the entity which believed most in the immense value Yahoo! has created
- Acquired Tumblr for \$1.1 billion and moved the company's blog there
- Built Yahoo's mobile, video and social businesses from nothing in 2011 to \$1.6 billion in GAAP revenue in 2015
- Tripled the company's mobile base to over 600 million monthly active users and generated over \$1 billion of mobile advertising revenue last year

Vice President of Location & Local Services
Google
Oct 2010 - July 2012 Palo Alto, CA

- Positioned Google Maps as the world leader in mobile maps and navigation
- Oversaw 1000+ engineers and product managers working on Google Maps, Google Places and Google Earth

Vice President of Search Products & UX
Google
2005 - 2010 Palo Alto, CA

Product Manager & Technical UI Lead
Google
Oct 2001 - July 2005 Palo Alto, CA

- Appointed by the founder Larry Page in 2011 to lead the Product Management and User Interaction teams
- Optimized Google's homepage and A/B tested every minor detail to increase usability (incl. spacing between words, color schemes and pixel-by-pixel element alignment)

Product Engineer
Google
23 June 1999 - 2001 Palo Alto, CA

- Joined the company as employee #20 and female employee #1
- Developed targeted advertisement in order to use users' search queries and show them related ads

MEET RAHEEL AFZAL, PERSONAL TRIUMPH OVER WEAKNESS.

“I AM NOT CONCERNED THAT YOU HAVE FALLEN. I AM CONCERNED THAT YOU ARISE”. ABRAHAM LINCOLN

Sometimes we experience hardships which make our life a constant, never-ending shift between successes and failures. We face failures in most of the important things in our lives but with each setback, we learn. We learn from our failed experiments and explore the opportunities for growth.

Most of the influential people in life cement their legacy through their failures. Such people are wise enough to allow failures and limited resources to change them and

shape them for good.

These are the people who become our inspiration and it is about whom a writer once said;

“IF THE HERO IN YOUR STORY DOES NOT EXPERIENCE TRAGEDY, THE AUDIENCE WILL NEVER RELATE TO HIM OR HER”.

Raheel Afzal is one such person who inspire people to write motivational stories focusing on personal triumph over weakness. He found growth in every opportunity and never took limited resources as an end to his journey.

His Educational Background:

Raheel is a computer science graduate with senior-level programming skills; he completed his MCS and started working as a software developer. But he was not satisfied with his job so he did MS in Project Management from SZABIST in order to change his direction for pursuing his passion. He worked for many companies but never had the long-term client base to start a business of his own.

His Journey:

Limited resources and no strong client base did not keep him from moving forward. In 2009, Raheel took the initiative and started an IT service, DatumSquare. He built a small office of 540Sq/ft with only one developer working with him. At that time, it came as a new model in offshore software development.

He really worked hard and his company started to gain momentum. All of his experience from previous job gave him an insight of which strategic policies to adopt when it comes to running a business.

These experiences made him take steps in the right direction of success. With his motivation, he transformed a two-employee startup into a thriving business with more than 100 skilled workers. Right now, he has his offices in Lahore and Islamabad and these are not located on a 540Sq/ft small area, these offices are built on 14000Sq/ft of area.

He has tasted heights of success in a short time, within 7 years,

He is working as an offshore staffing and management expert and his expertise mostly revolving around US based clientele.

His believes in working for the community:

With the help of his colleagues at Datum Square IT Services, he built Code Movement Pakistan. He founded this organization with a belief of giving back to the

community and to serve the people of Pakistan. This organization provides free training sessions and help students and IT professionals to improve their skills by successfully arranging Drupal Camps and WordPress Meet-ups.

According to him,

“I STRONGLY BELIEVE THAT ONLY AREA YOU CAN BEST HELP YOU COMMUNITY IS THE AREA YOU ARE BEST AT. SO CODING IS THE ONLY THING I HAVE DONE SINCE I STARTED MY CAREER SO THAT IS THE ONLY AREA I CAN HELP THE SOCIETY”.

His Goals:

Raheel Afzal is on a quest for finding the best solutions for the young generation of Pakistan, to train them so that they can compete on the international level. He is currently heading a team that is translating the WordPress into Urdu so that language does not become a hurdle for attaining knowledge of any kind.

His Advice:

His own journey towards success wasn't easy, he learnt from the setbacks. He wants to leverage these skills to school, college and university students in order to help them to excel in the world of programming. He wants the young generation to apply this simple rule in life, which was once told to him by his friend and mentor,

“IF YOU WANT TO SUCCEED, YOU NEED TO BE SURROUNDED BY THE PEOPLE WHO ARE SMARTER THAN YOU”.

Than you success is [guaranteed](#).

You can connect with him on [Facebook](#).

AMAZING INTERNET

AMAZING (NOT COMMONLY KNOWN) INTERNET FACTS.

Number of Internet Users:

There are 3.2 billion people use the internet and out of them 1.7 billion are Asians.

First Ever Registered Internet Domain:

The very first internet domain name that ever got registered was Symbolics.com on March 15, 1985 and still exists today. Symbolic Inc., a computer manufacturer headquartered in Cambridge, Massachusetts and later in Conrad, Massachusetts. It made prominent advances in the software technology and in 1080s and 1990s it presented premier software development environments which are now sold commercially as Open Genera for Tru64 UNIX on the HP Alpha.

APPLE 1, FIRST APPLE COMPUTER SOLD FOR \$815,000

Apple co founders Steve Jobs and Steve Wozniak built 200 units of these computers in 1976 out of which 175 were sold. Apple I, a prototype model computer is sold this week for \$815,000 in an auction and is considered as one of the first computers built.

The computer has tell-tale signs which suggest it is a prototype (pre-manufacturing run). Apple I is bought by Glenn and Shannon Dellimore who want to take it to the school and universities and inspire, motivate students.

The Celebration edition was tipped for US\$ 1 Million price but final bid price was \$815,000.

It is incredible to think that this was the very first Apple I, if not it surely is one of the first, if not first ever.

The Apple I was introduced for sale in 1976 for the price of \$666.66

FACEBOOK ROLLS OUT LIVE OPTION ON PROFILE FOR ANDROID USERS IN PAKISTAN.

Facebook has introduced LIVE video option on profile for Android users in Pakistan. Earlier this facility was available for few iPhone users (profile) and for both iPhone and Android users on Facebook Pages.

The Live feature is now available for the profiles (**not all**) who are using Android phone.

Facebook Live is a wonderful feature if used smartly, one can broadcast events, meetings and share amazing moments with friends and followers.

Facebook on their [Newsroom website](#) revealed the Live feature for Android in February, saying it is rolling it out to more countries in the future.

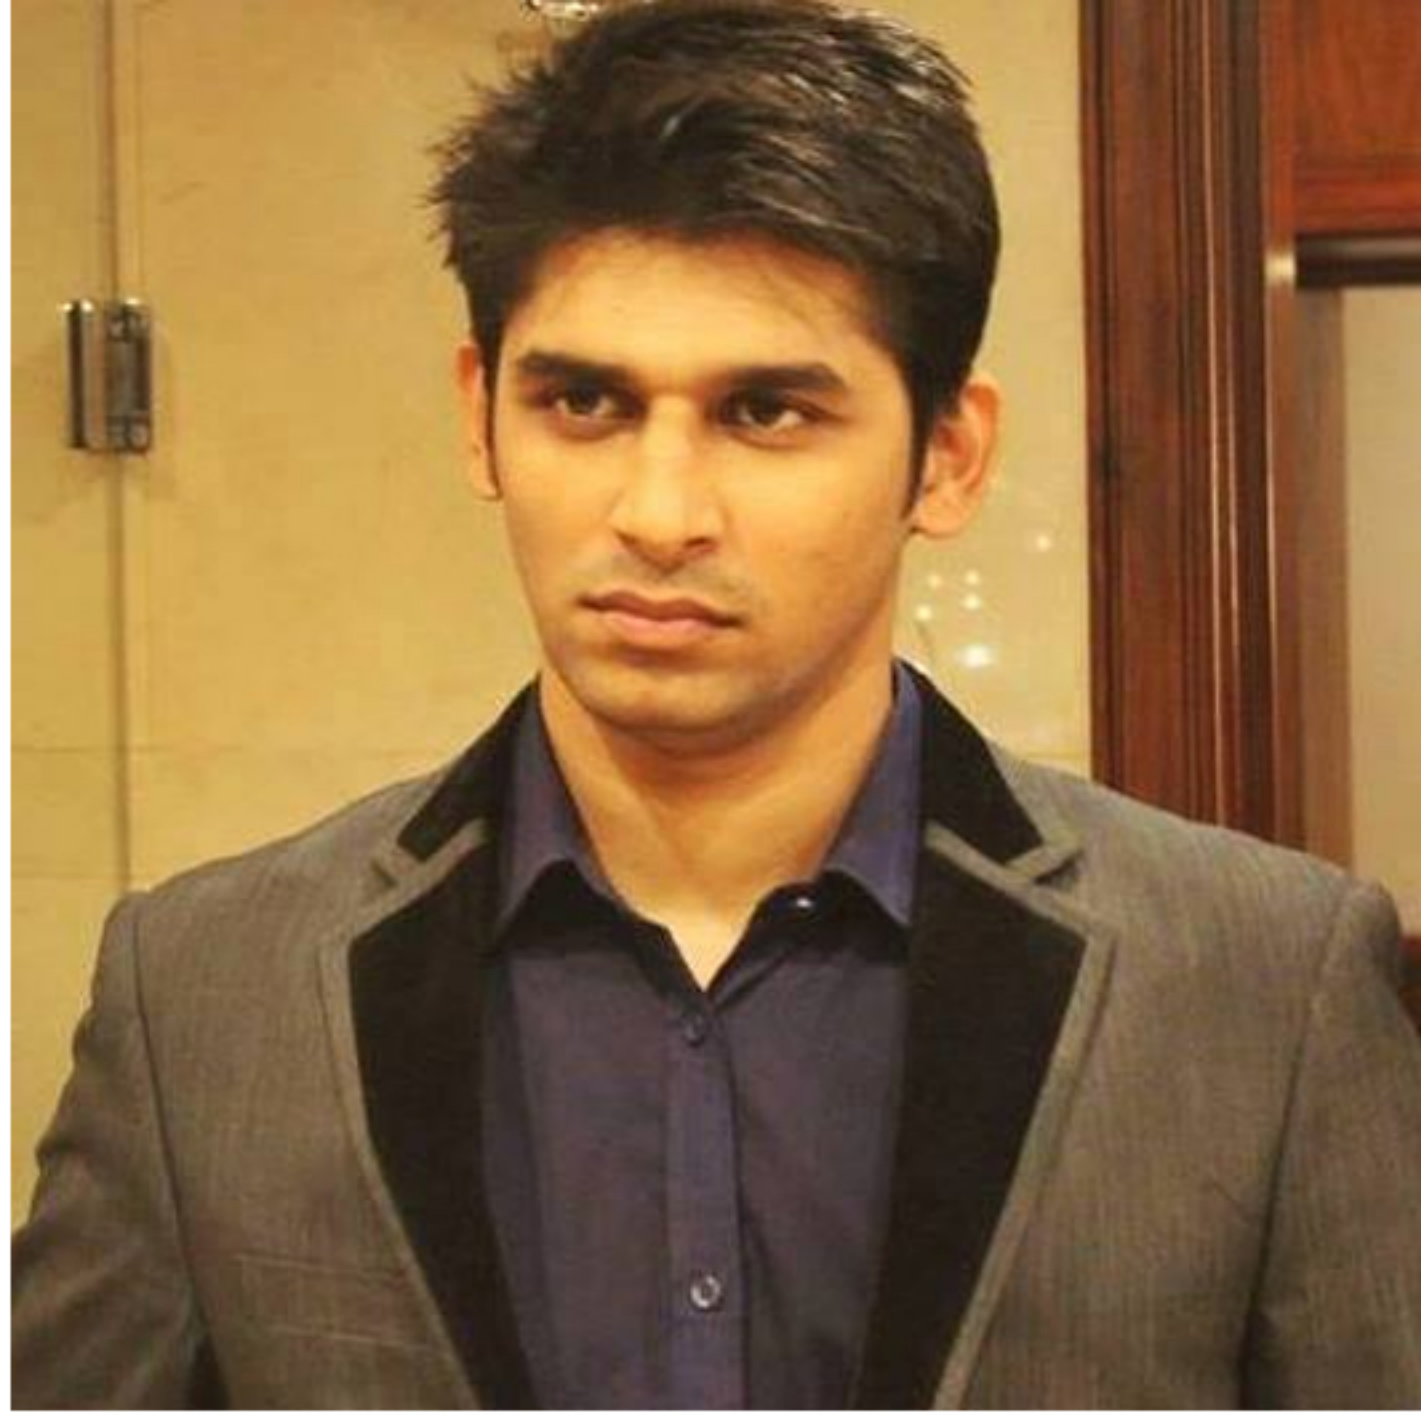

People watch live video three times longer than the recorded/not live video. the [website](#) also says that more than 50% of people watching live videos are using Android devices.

How to broadcast LIVE using Android phone?

Open your Facebook App on your Android phone, where it says "What's on your mind?", the LIVE button is visible. Click on the button, give your video a title, after few seconds you will see a blue button "Go Live". Click and go Live.

It seems that the option is not yet rolled out to all profiles on Android but it is advised to update your FB app from play store to ensure that you have the latest version.

WhatsApp data sharing should raise privacy alarms.

Whenever we sign up for websites such as Facebook, Google, Gmail, Yahoo etc. you agree with their “Terms and Conditions” and “Privacy Policy“. This agreement states that by agreeing to their conditions, we give them a right to use our information for better targeting of advertisements.

These companies do a great job while securing their user’s data against everyone else on the web except for themselves. Even though these companies claim that they keep strict policies about the user’s data and nothing is revealed except for court’s legal processes but that perhaps, is not always the truth.

However, programs such as NSA, XKEYSCORE revealed by Edward Snowden have disclosed that these companies leak customer data to NSA which is further processed. As information nowadays is digital, it’s 0’s and 1’s, which once used to be something on piece of paper.

“Internet has made it easier for Governments to take control of our minds”.

Nowadays, we are more honest to the search engines than our spouses, friends etc. The search engines know more about us than anyone, our interests, our likes, our dislikes etc. Therefore, disabling the “Check” option as in picture below from WhatsApp would prevent your data from being disclosed. Well, my answer is it does not stop. Let me tell you why I think so..

If you believe that a company invests and spends billions of dollars in building the infrastructure, paying electricity bills and giving salaries would allow you to enjoy everything for free, then I think you are mistaken.

Also See: [Rafay bags \\$5,000 for identifying browsers spoofing flaw.](#)

We do not pay anything for using Google Search, for utilizing Google Drive, Gmail, Facebook, and WhatsApp. A Company, investing so heavily on their infrastructure would eventually go bankrupt if they don’t have any rewards to reap.

It turns out that, nothing is free on the internet, there is no free lunch.

People generally come up with the argument that when they have nothing to hide, why would they be afraid? The question is, if they have nothing to hide and if they are not willing to keep secrets then how we can trust such organizations with our personal text and calls information?.

I will leave you with thoughts to ponder about this serious issue, are you safe online?

This is guest article by Abdul [Rafay Baloch](#)

Rafay Baloch is the first Pakistani ethical hacker to get international news recognition for his amazing work. He is a information security expert and evangelist. He is listed as ‘[Top 25 threat seekers of 2014](#)’ and ‘[The 15 Most Successful Ethical Hackers WorldWide](#)’ by SCmagazine for the issues he uncovered with Android. Checkmarkx has listed Rafay Baloch as ‘[Top 5 Ethical Hackers Of World](#)’.

APPLE’S NEW IPHONE HAS A RELEASE DATE, SEPTEMBER 7.

As it has happened in the last three years where Apple has released new iPhone in early September, this year seems to be no exception. Apple has sent invitation for a press conference on September 7.

It seems, probably the new iPhone will be released when the event takes place at Bill Graham Civic Auditorium in San Francisco.

Following the trend of pre-launch speculations which happen every year, iPhone’s new release has been in news for some time now this year as well. A Chinese mockup of iPhone 7 trended in social media earlier this year.

However, no one knows how the new iPhone will look like. It is absolutely a secret which only Apple knows.

Is it going to be a iPhone7, removal of an audio port, perhaps 2 cameras in the back?.

Hopefully we will get the answers and see the new, amazing iPhone on September 7.

4 TIPS TO BEAT THE CYBER CRIMINALS.

Want to have a secure online presence? This video gives an expert advise from best researchers around the world. Four easy tips to beat the cyber criminals and stay safe online.

TECHNOLOGY FIGHTS FOR GENDER EQUALITY

In this era, technology is something that you probably want or need for better and faster means of connecting to the world. Linking gender quality with the growing technology is morally and ethically imperative as you cannot ignore the rights and capabilities of half of the world's population which is **women**.

Technology can play a vital role in achieving gender quality as it identifies that women have the potential to improve resource productivity. Women are viewed as central workers for moving towards sustainable development and technology has strengthened their hands in the process.

Their participation foster gender equality and creates a positive impact on economic growth. But unfortunately most women do not have access to information and are not encouraged to get involved in the global development as they are mostly deprived of their basic rights.

How does access to technology lead to gender equality?

In order to improve women's lives, technology has provided them with a chance to learn more about ways they can use information. It offers training through webinars and tutorials for teaching the rules for small businesses and market growth. It has strengthen women's role in the world by providing them networks that lead to formation of saving cooperatives, self-help groups and small enterprises.

Because of disparities in opportunities as well as salaries, the traditional work structure does not suit most women. Technology has provided those means for work with which they are working as entrepreneurs, freelancers, web designers, graphic designers etc.

A research USA in the previous years has shown that almost 53% of the women are working as freelancers. This kind of work provides them an escape from traditional office dynamics and they can earn while having schedule flexibility.

Also See: (TODF), The Open Discussion Forum from Pakistan wins US\$3,000.

Women in technical world have struck on their own by focusing on their work and by proving themselves as vital contributors to the economy. Many tech companies, women are working as the forerunners and have transformed their companies' product development.

In many technical teams around the world, women are the driving force for innovations and ideas and these teams outperform teams that are composed of just male participants. They naturally move more easily towards the problem-solving approach thus making their teams more productive, diverse and innovative.

Technology can build better gender equality:

We can use technology to build more equal world in the following ways

Starting early:

Young children are fast learners and if we push our girls towards technical sector at an early age, we can help them to build their future in a much better way. By learning to find solutions to problems at an early age can prepare them for their future career issues.

Getting involved:

It is government's job to push women for getting involved in the technology revolution and have equal opportunity to technical sector.

Technological access:

It is the right of every person and women should have the equal right to lead the way in the technological progress. The women who are already leading the way should be acknowledge and supported by the society.

Women of today do not want to feel pushed away by hanging out with the traditional culture of working; they want to define their future by understanding the technological perspectives. Women are now making a mark in the tech industry and are inspiring the lives of many others.

Megan Berry, Head of Social Product and Community at RebelMouse encourages women by saying that,

“The Tech industry is risk friendly, so it's better to take the chance or take the lead if you think something might work. Just go for it and really put yourself out there because it's an industry that really responds to that. When you take risks and just go for it, you tend to be rewarded and see things happen.”

BEST CPM ADVERTISING FOR BLOGGERS

Over the past decade, online advertising has become an essential part of promoting businesses. Internet and mobile technology has completely changed the traditional methods of advertising. The advertisers and publishers always want to benefit from the pricing models that could help to gain more revenues. Cost Per thousand (CPM) is one such model that is linked with the sale, or any other measurable outcome.

What is CPM?:

CPM is a marketing term for Cost per Thousand impressions. It is basically used in traditional advertising media selection, as well as online advertising and marketing related to web traffic.

Purpose:

CPM is used to evaluate the cost effectiveness and profitability of online advertising. This advertising strategy is similar to those that are available on other media platforms such as television, print, radio, where advertising is sold on the basis of readership, viewership.

In simple words, CPM is a great way to earn revenues through online blogs. It pays you according to the volume of impressions that are received on an advertisement.

Formula:

The formula for Cost Per Thousand (CPM) is,

$$\text{CPM} = \frac{\text{Cost}}{\text{Total Impressions}} \times 1000$$

An advertisement's single instance is known as the "impression". These are present on your website. This allows you to earn money even if the readers of your blog do not click on the ads that are given on your site.

CPM is most preferable for bloggers and they can earn a good amount of money. There are 5 CPM advertising programs that can help you to earn more cash. These are as follows,

Adsoptimal:

All websites can benefit from this advertising network. But it is most beneficial for bloggers. They offer three types of ads such as CPM ads, CPS ads, and conversion based ads. They are partners with Google AdSense, Double Click, Criteo etc.

<https://www.adoptimal.com/>

Amazon CPM Ads:

Amazon CPM Ads are offered only for specific amazon affiliates. To see whether you are given this facility, you need to have an Amazon account. You can login to that account and check whether you have this option or not.

<https://affiliate-program.amazon.com/help/topic/t201>

Propeller Ads:

This is a most preferred choice for most of the webmasters. The reason for its popularity is that the ads are not restricted to any screen types. You can get an account in no time and after adding your domain and verifying

ownership, you can start with the program.

<https://propellerads.com/>

Conversant Media:

Being appreciated on the advertising platform, Conversant Media offer monetization of sites, mobile optimized sites along with mobile apps. It is a very trustworthy CPM based ad network and does not keep any restrictions regarding high traffic requirements.

<http://www.conversantmedia.com/publishers>

Exponential (Formerly Tribal Fusion):

The Exponential network rather seems a bit strict with its requirements for upcoming bloggers. It necessitates at least 500,000 specific users on monthly basis. But the CPM ads on Exponential, are of extremely high quality. This network offer 55% of the revenue for the publisher for Rising Start Ad format and pre-roll ads. In net revenue, their least payout is 50% and payment is Net45.

An Online Millionaire Who Did Not Know How To Code

In school and college days, after reading a chapter from your textbook you think you remember everything and are ready to take the test. But when you finally take the test; you forget most of the points. This happens because it's easy to read and believe that "I've got it". We often fail at the time of actual implementation. Only assumptions take you nowhere, you have to dive in deep to fetch the pearls from the ocean. You have to practically take action for testing all your ideas and thoughts to see which of these work and which are of no use.

Tara Reed, CEO at Kolleto and AppWithoutCode.com, managed to turn her imagination into an art-collecting app in US. Being an art collector herself, she was always interested in getting cool visual arts for her walls. But she figured out that people who did not want to comb through galleries and exhibits for collecting art, there was no website that was available. She sensed an opportunity and went on to build something which would change her life forever.

She built an App without knowing how to code and is now a millionaire

So she built an app to provide people with affordable access to their own personal art buyer. But as she did not know anything about writing a code, so she built the app on Bubble.

Website without code spared her from the technical debt and she operated a business at a low cost.

Her art collecting website became a cash-flowing business and is currently winning thousands of customers per year. It is not only popular among customers; it also is a hot spoy for startup funding competitions, investments and grants etc.

Reed's Kolleto's platform and the consulting side gig brought her net worth to just over \$1 million. The App AppsWithoutCode.com helps non-technical folks to build and market their own apps and make money from their apps.

Willpower is the secret element which played an important role in Tara Reed's success; she just believed that she could do what she wanted. She erased all her fears of taking risks and continued with pursuing her goals and never looked back.

Her advice for everyone is,

"When people ask me for advice, I tell them: Get going. Chances are, you'll have something wrong, but you won't know until you test those assumptions with actions".

Samar Khan Has Created a National Record In One Attempt.

After setting the record of cycling from Islamabad to highest international border (Khunjerab) in September, 2015, this year Samar Khan has attempted another huge challenge of cycling on Glaciers (BiafoGyang) in the Karakoram ranges of Pakistan. Samar Khan is a Passionate Cyclist who wants to promote the sports in Pakistan. She is a renowned social worker and is a True drops ambassador in Pakistan. She belongs to a Pathan family and to take up this sports which is usually associated with males, she had to rebel against the tribal stereotypes.

My Family has always been there when i needed them the most, the support and love i got from them encouraged me to break the barriers and go for my dreams.

She is the first Pakistani who paddled to Biafo Glaciers and also cycled over there. She set out from Islamabad on 24th July, 2016 and took the route of Abbotabad, Naran, Kaghan and Babusar Top towards her destination. By covering the distance of almost 800km till the last remote village of GB, called Askoli, which is the entrance point to Glaciers, she trekked for 4 days and reached the icy-rock surface where she attempted the record.

But it was not only the single challenge to attempt, she also wanted to summit the virgin peak for which she reached Latok Base Camp with her porters and high altitude climber Mr. Asghar Hussain (G1, G2 and Broad Peak Summiteer). She got successful in reaching to the camp2, but could not make the summit due to bad weather conditions. This event was called 'Ride to Glaciers Cyclothon' as many cyclists were invited with the proper update of dates and spots to join Samar Khan. She got warm response from the cyclists who have joined her in different spots like Abbotabad, Bessel, Babusar Top and Jaglot etc.

Many domestic and international tourists met her along the way and really appreciated her courage and determination of promoting a healthy activity like cycling among the youth and projecting positive image of Pakistan to the world. The fears and insecurities of international tourists were also removed by the practical example of this solo rider. She has played her part in uplifting the name of Pakistan; not Nationally but also Internationally. She has proved that Pakistan is a safe place to pursue sports and promoting tourism. Her journey and efforts are broadcasted by BBC, Voice of America and all the mainstream media of Pakistan.

This achievement is a National record as no other Pakistani has attempted it before. Samar is an inspiration for all the girls of Pakistan who want to chase their dreams, but they can not.

6 STEPS TO START A SMALL BUSINESS.

Small businesses are the driving force for a nation's economy. They have the tenacity to overcome the hurdles that come in their way. Small businesses can become a wealth-generating machine if they are operated with accurate strategies. Although becoming your own boss seems wonderfully exciting but it isn't as easy as you think. First a person needs to consider if he/she can deal with challenges personally and professionally.

Building an empire of one's self will never come to fruition unless you strike out on your own in the right direction. You will have to break down the process into smaller steps and set them as goals to be achieved for your business. By achieving every goal you will climb each step which will lead you to build a stronger business of your own.

Following are the simple six steps that can help you to start with your own business.

Write a one-page business plan:

The first and foremost thing while starting a small business is to keep it simple and low cost. A one-page plan requires you to create a plan that includes,

Write the vision for your business, which level you want to achieve.

Write your mission; explain the reasons of creating your business.

Define your goals that will lead you to your vision and mission.

Highlight what basic strategies you will adopt for achieving your goals.

Write a simple action plan by bulleting out the smaller task-oriented actions in order to achieve your objectives.

Decide on a budget:

Every successful business needs a budget but you have to make one that works best for you. Before diving in to the ocean to fetch pearls, you need to know how to swim first. In the same way, before making money you must figure out how to spend it. Keep your costs as low as possible, determine a budget to get started and keep a limit to how much you can spend. Always keep an additional 20% of the budget to keep your business afloat before you start making profits. You can expect profitability within first 30-90 days but you must keep a cash reserve for any unforeseen events.

Decide on a legal entity:

Choosing a legal structure is one of the most important decisions you make while starting a business. All business structures have legal and tax implications which can increase your costs so always decide on a legal entity that suits best for you. When you are starting a business, it is best to be the sole proprietor of your business. It will keep the costs to minimum level. But it will make you more responsible for all the actions and decisions that you will make on your own. So always get the advice of a good local attorney or a tax professional to know what kind of decisions can affect your business.

Take care of your money:

Always keep your business and personal accounts separate. Set up a business account with your local credit union or bank and you will be required just to fill up the paperwork, give sole proprietor licensing information and an initial deposit to get started.

Get a website on your own:

If you do not get a website for your business, you lose out a lot of great opportunities for your business. A website can help you achieve various marketing strategies to help your business to grow rapidly. You can choose a website domain address of your choice and can purchase it for as little as \$9.99

Test Sales:

At this stage you have spent hours creating, organizing, and pricing your products, now you must see whether it entices people's eyes or not. Try to advertise your product the inexpensive way, get involved with your local chamber of commerce, and enquire opportunities that you can avail to share information regarding your business. Your business success depends on your sales ability to attract web traffic through the Facebook Ads or set up a simple Google Ad Words account.

Be passionate about what you do, learn and grow from your mistakes and set realistic business plans that will brighten up your path to success.

Samsung Galaxy Note 7 Sets A Car On Fire

If Samsung batteries explosion and phone catching fire was not enough headache for the company already, here comes double trouble. A guy named Nathan Dornacher from Florida claims his Samsung Galaxy Note 7 set his car on fire and we all know, battery could be the only reason. Nathan gave an interview to Fox News and told about the accident. He left the car parked with phone charging and AC turned on to keep the car cool as he had to move some furniture but when he came back, car was engulfed with fire and flames.

“Not the barbecue I wanted on my day off. We go to a garage sale to grab a desk for bonnie get back to the house unload the car leave it running ac on to keep the car cool we were planning on grabbing the dog and Bonnie and heading to petco, I head back out to the car to grab my phone which was on the charger (me and Lydia always fight over the house charger)

go to open the door and see flames inside... open the door and it's engulfed run inside to get extinguisher and of course not to be found yell at Lydia to call Fire Department and well here is the end result....”

Luckily, there was no one in the car narrowly avoiding human injuries.

Samsung has already recalled Note 7 from 10 countries after reports of batteries catching fire 35 times. One hopes Samsung rectifies the issue immediately.

Pakistan is Love, My Interview with Turkish Biker Blent Esin.

Vists Pakistan after 25 years.

A country that has 4 of the world's top peaks in the world, largest irrigation system on globe, highest paved international road in the world is surely the best tourist sight and should be explored. A Turkish/German Tourist Blent Esin, came back to Pakistan just to see these beautiful sights and has fallen in love with the country, its people.

I came to know about Blent's entry in Pakistan 3 weeks ago, after trying to get his contact information, I finally met him in Murree. Here are the 4 videos I recorded which will make you proud as Pakistani. I learned few Turkish words and taught him some Urdu words as well. Blent traveled from Turkey to Pakistan. He started his journey a month back. He went to Iran first and then entered Pakistan through Baluchistan, Sindh and then came to Punjab and wants to see Naran/Kaghan and Saiful Malook.

Blent talks about why he came back to Pakistan after 25 years, yes 25 years of wait and he says it was worth it as all these years he has been thinking about going back to the country he spent the best time of his life.

He first came to Pakistan on his 10 marriage anniversary with his wife.

Blent talks about Pakistani people, he says; they are beautiful, hospitable and very kind. He made some good friends in his last tour to Pakistan 25 years ago.

Blent's beautiful message to the world about Pakistan. He says this is a beautiful country with beautiful people. It is safe and secure and people most come to Pakistan to see with their own eyes and know the truth.

In a offline video discussion, he said he was not 1% afraid of coming back to the country though Pakistan in last decade or so has been in mist of all the crisis.

“Bad things happen everywhere, InshAllah it is about time things will change for Pakistan and it will become the most peaceful country in the world”.

being **GURU**

being
